

web10 - for UI web developers - part 1

1. use cases
2. the developer interface
3. system level explanation

developer requirements

1. A react developer makes a UI.
2. They want to turn it into a full demo with live data.
3. They don't want to pay for dbs / backend.
4. They want to list the app demo / advertise it somewhere.

developer use case

1. They import 'web10-npm', and add web10 login.
2. They add a simple web10 contract
3. They use web10 as a database to store user messages.

value added

1. The app demo is live with a working backend.
2. It is entirely free for the developer.
3. The app demo is auto listed on the web10 app store.

the developer interface

1. authentication
2. contracts
3. databases

authentication

contracts

databases
